

The Peacock bite ...

BUILT CAPACITIES OF 29 TRIBAL YOUTHS FROM 6 STATES

The Rural Development sector today faces complex challenges of growth, equity, climate change, and social & economic security of the poor and vulnerable communities. This context has impressed upon the RD programmes of government and non-government organizations a growing need for intervention strategies that are reflective, robustly designed, and implemented through an innovative and adaptive approach. It is therefore clear that there is a dire necessity to build capacities in the cadre of rural professionals. To action on the requirement of rural professionals, IIHMR University Jaipur and BRLF joined hands in November 2016 last year to build capacities of 30 students from 6 states of Central Indian Tribal belt. 29 of these students successfully completed their training of their Rural Livelihood Programme and were jointly conferred with certificates by IIHMR University and Bharat Rural Livelihood Foundation.

WORDS FROM THE PRESIDENT

Dr. Vivek Bhandari, President, IIHMR University Jaipur said, “It is clear that there is an urgent need to address this capacity building challenge by preparing a cadre of rural professionals who are capable of engaging in the rural development sector specially at the sub-district levels; be it through NGOs, government institutions or as elected representatives of the PRIs and/or cluster level federation leaders. To support this, IIHMR University and Bharat Rural Livelihoods Foundation (BRLF) jointly announced the launch of the first batch of the Certificate Programme in Rural Livelihoods in November 2016 last year. The programme aimed at combining appropriate knowledge and skill components through a unique yet inclusive capacity building initiative. About 30 students were admitted to the certificate programme which included 8 from Orissa, 8 from Rajasthan, 5 from Maharashtra, 4 from Madhya Pradesh, 1 from Chhattisgarh and 4 from Jharkhand.”

Convocation Ceremony Speech by Padma Bhushan Dr M.K. Bhan at IIHMR University

The global community including our own cyclically drifts between optimism and cynicism. I am a perennial optimist. In more ways than not the world is a better place today. People live longer, they live better, they are healthier, more people have access to education and health, and there are fewer poor people today than before.

It is at the same time unwise to be euphoric and ignore the massive unmet needs and challenges at home, and world at large; lack of trust, social and economic disparity, poor environment and climate, lack of access to basic services, lack of security and empowerment of women, utter disregard for evidence and facts, which are increasingly replaced by prejudice and unsubstantiated opinion. Many of the young, the disadvantaged and elderly are still unsafe. People live longer but this extended life is often neither secure nor graceful?

Is optimism then justified? I believe so because humans have shown resilience as a species to solve problems on an unprecedented scale.

To succeed then we need a scientific approach to life, an ability to generate and deploy knowledge and technology for shaping a better, fairer, interesting, more secure world and the nation. This is what IIHMR has prepared you for and this is the mission that we charge you with today. This is what wiser of the parents and elders of our society have always taught us.
